TT-TV-TK Series

TT-TV-TK SERIES

SIPCO offers a complete product line of standard and precision components.

SIPCO has been satisfying customers since 1984. In that time, we have established a reputation for providing product services & Mechanical Linkage solutions to industries using motion control, power transmission, and hydraulic systems. Today, our products are in applications, including robotic, packaging, automotive, printing and material handling applications to name a few. Through this experience, we are continually evolving, offering new innovative solutions for high-tech applications. When you have one source, you only have to place one order to fill your Mechanical Linkage needs.

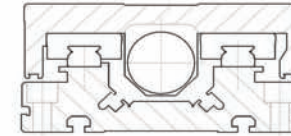

LINEAR MOTION SYSTEMS

Precision ball bearing guides with ground rails and preloaded blocks are used on TT linear stages series. Use of this technology makes it possible to obtain the following features:

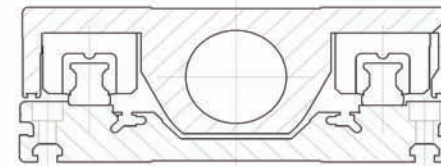

- High accuracy running parallelism
- High positioning accuracy
- High level rigidity
- Reduced wear
- Low resistance to movement

PROTECTION

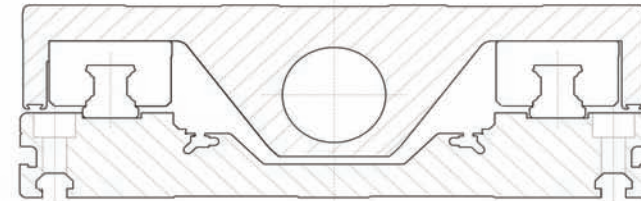

TT linear stages series are equipped with bellows in order to protect the mechanical and electronic components inside the linear stage against contaminants. Also, both the ball bearing guides and the ball screws are equipped with their own system of protection, such as a scraper or lip seal, that operate directly on the raceways of the balls.

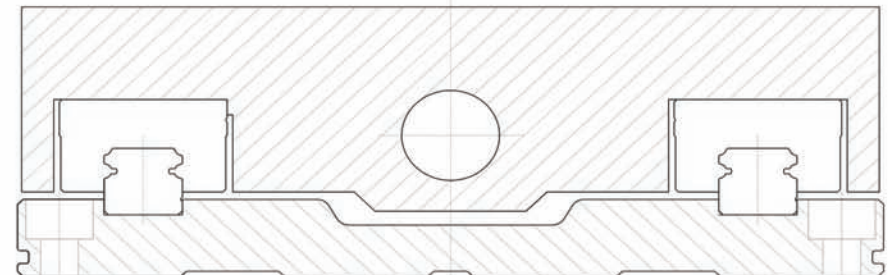

TT100 with ball bearing guides
Outer dimensions: 100x50

TT155 with ball bearing guides
Outer dimensions: 155x60

TT225 with ball bearing guides
Outer dimensions: 225x75

TT310 with ball bearing guides
Outer dimensions: 310x105
