ELM Series

ELM SERIES

SIPCO offers a complete product line of standard and precision components.

SIPCO has been satisfying customers since 1984.

In that time, we have established a reputation for providing product services & Mechanical Linkage solutions to industries using motion control, power transmission, and hydraulic systems. Today, our products are in applications, including robotic, packaging, automotive, printing and material handling applications to name a few.

Through this experience, we are continually evolving, offering new innovative solutions for high-tech applications. When you have one source, you only have to place one order to fill your Mechanical Linkage needs.

- The ELM series comprises variously-sized linear units so that the designer and/or user is able to select the most suitable system according to load and shuttling speed required.
- The ELM units, made of self-bearing extruded aluminum, are produced with two linear motion systems;
 - ELM...SP with maintenance free ball bearing guide fitted inside the extruded body.
 - ELM...CI with four rollers with lancet arch external profile that slide on hardened steel bars inserted inside the extruded body.
- The ELM series use polyurethane transmission belts with steel inserts, AT pitch and parabolic profiles. All inside mechanical parts are protected against dust and foreign objects by a polyurethane belt.

ELM 50-ELM 65

Body dimensions 50x50, 65x65mm
With sealing strip

With ball bearings guide

With lancet arch bearing

With ball bearing guide

With lancet arch bearing

ELM 50 SP

ELM 50 SP

ELM 50 SP

ELM 50 SP

ELM 80

Body dimensions 80x80mm with sealing strip

With ball bearing guide

With lancet arch bearing

ELM 80 SP

ELM 80 SP

ELM 110

Pro file dimensions 110x110mm with sealing belt

With ball bearing guide

With lancet arch bearing

ELM 110 SP

ELM 110 CI
